

Paul Smal

I have 12 years experience of development projects in telecom, computer networks and logistics. Worked with enterprise and recently with startups. As a manager or developer I value and encourage openness and softer management strategies, primarily focus on increasing efficiency and benefit realization.

My main field of interest is concurrency and distributed programming, soft-real time applications, graph databases and innovative startups.

I withdrew from university in 2006 for work and didn't get a chance to get CS degree since then.

EXPERIENCE

Sigma Software · Startup enthusiast

Aug 2017

Attracted venture backed startups in blockchain area as a customers and led integration projects for two advertising providers.
