## SOFTWARE DEVELOPER / STARTUP ENTHUSIAST

Software developer and OSS software user. Recently I worked with Elixir, JS, Elm but I would be happy to work with other languages too. I can drop into "DevOps" role if needed to automate my workflow. Experience in communications, networks and logistics areas. I'm curious about startups, programming, BeamVM and would like to find a job that intersects with my interests and experience. I withdraw from university for work after 3 years studying CS.

## EMPLOYMENT TIMELINE

**Sigma Software | Startup enthusiast**    2017-2019
Attracted cryptocurrency startup as a client.
Developer on demand

**Freelance**    2015-2017
System architecture and design
Team management
Customer delivery
Business development

Computer system administration

## RECENT PROJECTS

**TalkJS** | Chat SDK for web applications
Elixir, Phoenix, React Native

Influence marketing aggregation platform
PHP, Single Sign-On

VoIP testing suite
Go, Elixir, Freeswitch

**TimeTed** | Tax automation software
Java, PostgreSQL, JS

**Nora** | Oracle database client GUI for MacOS
Objective-C, C, Cocoa

CRM with Email integration
Java, Scala, Play framework, PostgreSQL

## SKILLS

**Linux**
As a main desktop and server OS.

**Git, SSH, Vim, Tmux**
Main daily drivers

**Elixir, Phoenix framework**
Writing backend services, database access layers, ecosystem.

**JavaScript**
Writing simple web and mobile frontend apps with React and React Native

**HTML, CSS**
Creating web pages with unsophisticated designs

**Inkscape**
Creating visual stuff for various purposes, like this CV

**LXC, ZFS, Docker**
Can drop into "devops" role to automate my dev workflow

**Databases**
Mostly used **SQL** but familiar with document and graph databases

**Java, Objective-C, C, PHP**
Had some work to do with this languages but quite long ago

**WebRTC, RTP**
I'm able to read documentation about different protocols and do data integrations
