SOFTWARE DEVELOPER / STARTUP ENTHUSIAST

Software developer and Linux user. Recently worked with Elixir, JS, Elm but I would be happy to work with other languages too. I can drop into "DevOps" role. Telecom, Chats, OSS/BSS, CRM, Logistics, AdTech. I'm curious about startups, functional programming, BeamVM and would like to find a job that intersects with my interests and experience. I withdraw from university for work after 3 years studying CS.

EMPLOYMENT TIMELINE

Sigma Software | Software Developer   2017-2019
Attracted cryptocurrency startup as a client.
Fullstack developer on demand

Freelance   2015-2017
